

Question 13

Q: What should be done if an error occurs related to a self contact?

A: The self contact is the state where a body has a topology, such as a vertex or an edge, in contact with the body itself.

Take precautions to avoid such shapes. If necessary, cut the original body to remove the self-contact topology.

Please refer to the Femtet help menu below for more information.

Home>Error List>Modeling/Results Display Errors>E1149 The resulting body is invalid
