

**Q:** How to edit a macro file? Are there any tips?

**A:** Femtet outputs a macro file including the methods below.

|                       |  |
|-----------------------|--|
| FemtetMain():         | Main method for combining entire processes |
| AnaysisSetUp():       | Method for setting analysis conditions     |
| BodyAttributeSetUp(): | Method for setting body attributes         |
| MaterialSetUp():      | Method for setting material properties     |
| BoundarySetUp():      | Method for setting boundary conditions     |
| MakeModel():          | Method for creating models                 |
| SamplingResult():     | Method for extracting results              |

(Continued answer)

Users can designate portions to be automated by macro or modified for advanced processes and then can edit to change the methods or to add arguments.

Many samples using macros are provided on the Murata Software homepage below, where you can download them.

<https://www.muratasoftware.com/en/support/macro/>

Please refer to the samples for a better understanding of macro usage.
